## INTRODUCTION

There are many possibilities, strategies and techniques to increase your capital.

Before we move on to described strategy that interests you most, a few words of intro.

Remember that sport trading is not a betting using bookmakers. The same rules applicable to financial markets apply here also.

If you would like to become a professional sport trader, read about the psychology of investing.

Below are a few important bits of advice to start with:

Don't be greedy and anxious

If you leave your emotions behind and come up with your own strategy, that you consequently use, the money will follow.

- ✔ The same rule applies when you're investing money in capital markets- protect your capital first and manage it wisely by risking small amounts of it in a single transaction.
- ✔ Don't be afraid to realize loses. Try to think like a casino, that loses 48 times but wins 52 times on average, thanks to house advantage. This 4-5% gain over the long term allows them to make a fortune.
- ✔ Set up a realistic goal and be disciplined. It'll be easier to achieve success this way.

Some people need additional advice and encouragement before they start. This e-course will help you with that.

In the next section I'll show you a simple strategy, step by step, should quickly start bringing you a nice profit.

*Note: We all know that football is unpredictable and our emotions interfere with our judgment. Remember you have to think like a casino. Your winnings have to be higher than your losses in the long term. Making money is easy, if you stay focused and get rid of emotional behaviour.*

## System 1 - Ending of the game – [SportTrader.net](#)

To demonstrate the system in this e-course we used:

-----

Betting exchange: [Betfair](#)

Software: [BetTrader](#) (New recommended software – [FAIRBOT](#))

Match watched using [Bwin](#) platform.

Market that we're trading is 'below 3.5 goal', because the result of the game so far is 2-1 which gives us 3 scored goals in total.

---

### **Description:**

In the example below „Serie A” - Bologna – Reggina, the referee added an extra 5 minutes. The game score is 2-1, and 94 min 30sec of the game has been played. The bets are placed between 1.03 and 1.08. This means if you bet £100 that there will be no goal within the last 20 seconds of the game, you can win between £3 and £8, so 3-8% in few seconds. In this case we risk the whole capital, but the risk is minimal, because we've selected a point near the end of the game. One of the Bologna players is just about to shoot on goal, that's probably the last chance to score. The risk is very small, because after clicking the bet onto the ladder, a few seconds (5-8 sec.) passes before your bet is added to the queue, so even if the player scores- this bet won't be accepted anyway. But if the ball goes out of play, your bet will be visible after a few seconds as the first one waiting in the queue to be accepted- see the screenshot below. At the 'kick moment' I made 2 'back' orders for £50 (blue column, that shows all bets that the result of the game will be below 3.5 goals (screenshot 1)).

SCREENSHOOT no 1

Bets of 1.06 and 1.07 have been accepted a moment after the ball passed the goal. There's still 10 seconds left to the end of this game and when the goalkeeper kicks the ball, the referee will probably finish the game (screenshot 2).

The screenshot displays a trading interface for a football match. It is divided into two main sections: 'Poniżej 3.5 gola' (Below 3.5 goals) on the left and 'Powyżej 3.5 gola' (Above 3.5 goals) on the right. The left section shows a profit of £6.50 and a risk of 0.47. The right section shows a loss of -£100.00. Below these sections are two columns of betting odds. A red arrow points to the 1.07 odds in the left column. A red circle highlights the 1.06 and 1.07 odds in the left column, with a text box stating '3. Bets of 1.07 and 1.06 have been accepted'. Another red arrow points to the 1.06 odds in the left column, with a text box stating '4. There're just 19 seconds left until the end of the game, goalkeeper is getting ready to kick the ball, quite possible the referee will end the game just after that. We win £6.5, the possibility of scoring a goal is very unlikely at the moment and gained 6.5% profit is definitely worth taking that risk.' At the bottom, there is a video player showing a football match in progress, with a score of 1-2 and a time of 94:41. The video player has a 'VIDEO' button and a play button.

SCREENSHOOT no 2

Just like I suspected, the referee ended the game. That has given us a £6.50 profit in a few seconds (Screenshot 3).

The screenshot displays a betting interface for a football match. The top section is split into two panels: 'Poniżej 3.5 gola' (Below 3.5 goals) and 'Powyżej 3.5 gola' (Above 3.5 goals). The left panel shows a profit of £6.50 and a closing price of 5.45. The right panel shows a loss of -£100.00. A large red 'SUSPENDED' banner is overlaid on the center. Below the banner, a video player shows a referee in a yellow shirt. A red circle highlights the time 94:55 in the video player. A red arrow points to the £6.50 profit.

6. We earn £6.5 without any risk taken.

5. The game was ended by the referee just after the goalkeeper's kick.

94:55

SCREENSHOOT no 3

### **SUMMARY:**

This strategy is very simple and it doesn't require much time. It's enough to have the list of live football games that we want to bet on and the list of games available on the internet and on TV. Using simple match schedules we can keep switching between different games and watch only the endings. In less popular games it's possible to see bets above 1.10. For example, in a friendly game between Poland and Northern Ireland the accepted bets were 1.18, so it was possible to earn an 18% return within a few seconds.

For people with more capital, the problem may be liquidity at the end of the game. It's often the case that larger amounts of money will not be accepted. However it's possible to earn some money in a few seconds.

It's easy to notice that professional software like BetTrader is very useful in this strategy, because speed and easiness of placing bets is extremely important here. Those features are not available from Betfair or other free software.

Professional software is something that you shouldn't save any money on. This investment will pay off quickly and without it you may lose your capital.

Remember to learn and develop your knowledge and skill in this subject.  
Check the SportTrader website for more interesting systems.

We wish you all the best.

Regards

SportTrader
